We are committed to making commercial road transportation clean, fair and efficient.

Top 3 priorities

Energy-agnostic approach to the decarbonisation of commercial road transport

Facilitate the development of **green fuel corridors** within the EU

CO₂ emissions

-90% reduction

Energy agnostic

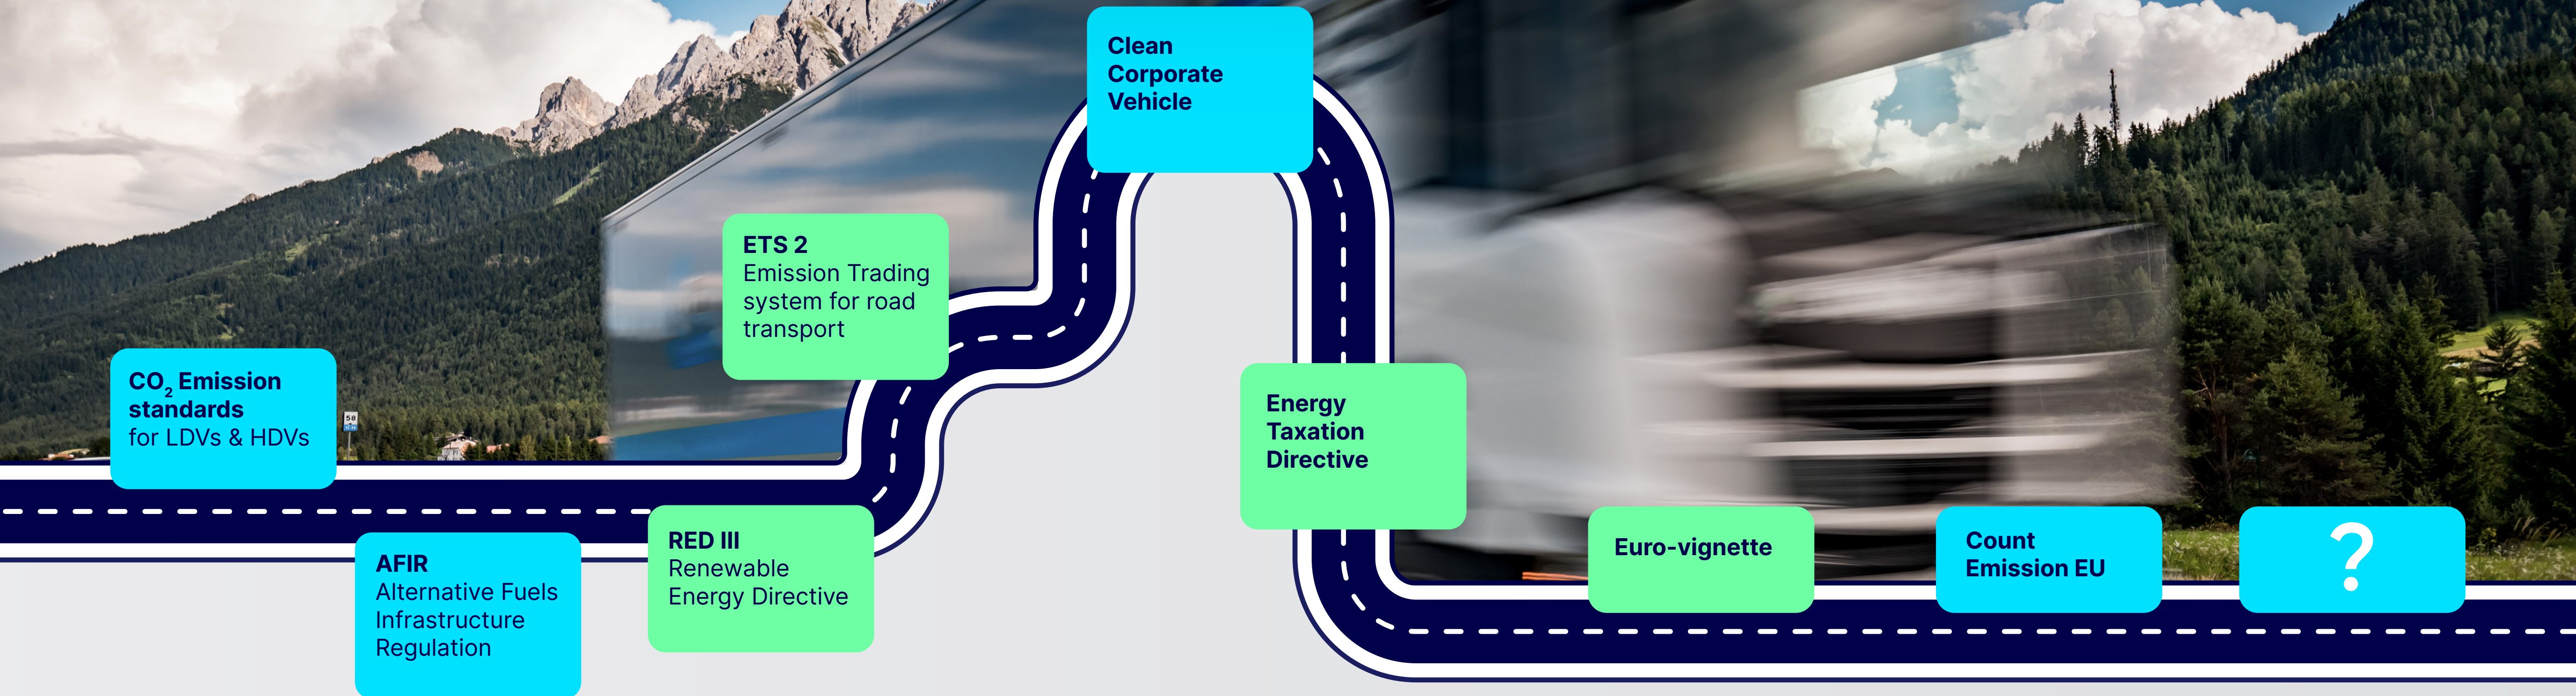

The climate is like a bathtub that's slowly filling up with water. Even if we slow the flow of water to a trickle, the tub will eventually fill up and water will come spilling out onto the floor. That's the disaster we have to prevent. Setting a goal to only reduce our emissions—but not eliminate them—won't do it.

– Bill Gates

EU road transport decarbonisation landscape

- Siloed approach
- Tailpipe vs. life cycle approach leads to incoherence
- Technology neutrality at risk
- Fuel taxes and road charges inconsistent
- Uneven implementation

Green Fuel Corridors

bioLNG
Liquefied
biomethane
